

BFN

Bulk Fuel Nozzle

BFN-P
(Bulk Fuel Nozzle with Plug)

The *FloMAX* Bulk Fuel Nozzle has been designed to transfer large volumes of fuel at high flow rate using existing standard 1 1/2-inch fuel receivers. While best results will be obtained using a *FloMAX* FRA, FRS or FR-RS fuel receiver, the BFN is completely compatible with all industry standard fuel receivers.

The BFN has a push-to-connect design that releases from the receiver with a gentle pull on the pullback or the poly coated stainless steel lanyard. This is a dry break nozzle that uses the same poppet and vulcanized Viton seal valve sleeve as the *FloMAX* FN600 and FNBL fuel nozzles. The BFN is an excellent option when high fuel flow is required, but auto shutoff isn't.

The BFN is rated at 625 PSI burst pressure and 300 PSI operating pressure.

FloMAX now has a range of dry-break nozzles from the 1/2 inch CN Coolant Nozzle, the 3/4 inch ENBL Engine Nozzle, the 1 inch HFN High Flow Nozzle, and now the 1 1/2 inch BFN Bulk Fuel Nozzle.
